Rochester, New York

EXPERIENCE

- **M&T Bank**
  Senior Business Analytics Reporting Analyst
  Using SQL Server in conjunction with other tools to create the back-end for reports for business banking.
  June 2023 Onward
- **Rich Products**
  Co-Op in Data Analytics
  Used data from multiple sources with pySpark and Pandas in Databricks to create customer focused solutions for sales and financial insights.
  Jan 2022 to May 2023
- **IDtech**
  Online Tutor
  Tutor of Python and Math to students of ages 9 - 18.
  August 2020 to May 2021

EDUCATION

- **B.S. Software Engineering, GPA: 3.28**
  Rochester Institute of Technology
  2018 - 2023
- **B.S. Economics, GPA: 3.28**
  Rochester Institute of Technology
  2018 - 2023
- **M.S. Data Science, GPA: 3.93**
  CUNY School of Profession Studies
  2024 - 2025

SKILLS

- **Technologies**
  Python, Java, Azure, PowerBI, SQL, pySpark, Pandas, Visual Studio, SciKit-Learn, LLM Fine-Tuning, R
- **Patterns & Practices**
  Object Oriented Programming, Procedural Programming, Azure
- **Project Management**
  Agile, Scrum, GitHub, Microsoft Planner

PROJECTS

- **Client Segmentation**
  A consolidated report on all customers of the bank and their product and revenue history, using 8 different data sources and updating daily.
  SQL Server, SQL, SSIS, Python
- **Merchant Services Gap**
  Created a random forest model designed to find cross sell opportunities with current customers who do not have merchant services with M&T.
  Python, Pandas, Jupyter, Scikit-Learn, Matplotlib
- **Coronary Artery Disease (CAD) Prediction**
  A research report that using publicly available data looks into the top risk factors that predict the likelihood of having CAD using regression techniques.
  R, Rstudio
- **Call Notes Grading**
  Using notes from ERM software tested a variety of models, settling on a RoBerta LLM to preform sequence classification to grade the notes of relationship managers.
  Python, Pandas, SQL, SQL Server, SciKit-Learn, Open-Source LLM's
- **NCAA Hockey Prediction**
  A random forest model that scraped publicly available data from the internet to predict how well a D1 Men's NCAA Hockey team would preform in an upcoming season.
  Python, Pandas, BeautifulSoup, SciKit-Learn
